

Activity Overview

In this activity, you will demonstrate your experience using SQL. You will review a scenario and follow a series of steps. This scenario is connected to the lab you have just completed about using the AND, OR, and NOT operators in SQL to filter for information. You will explain the queries you performed in that lab.

Scenario

Review the scenario below. Then complete the step-by-step instructions.

You are a security professional at a large organization. Part of your job is to investigate security issues to help keep the system secure. You recently discovered some potential security issues that involve login attempts and employee machines.

Your task is to examine the organization's data in their **employees** and **log_in_attempts** tables. You'll need to use SQL filters to retrieve records from different datasets and investigate the potential security issues.
